Examples of Modern Mine Designs

UK and Europe

These mines have been designed / built in environmentally sensitive
areas

Cononish Mine – Scotgold Resources - Scotland

- Underground gold mine situated within the Loch Lomond and Trossachs National Park
- Mine is currently under construction and nearing production
- Access via a portal, with onsite processing

Processing Plant

Portal

Mittersill - Wolfram - Austria

- Underground tungsten mine situated within the Austrian Alps
- Mine is in full production
- Access via a portal, with onsite processing

Processing Plant

Portal

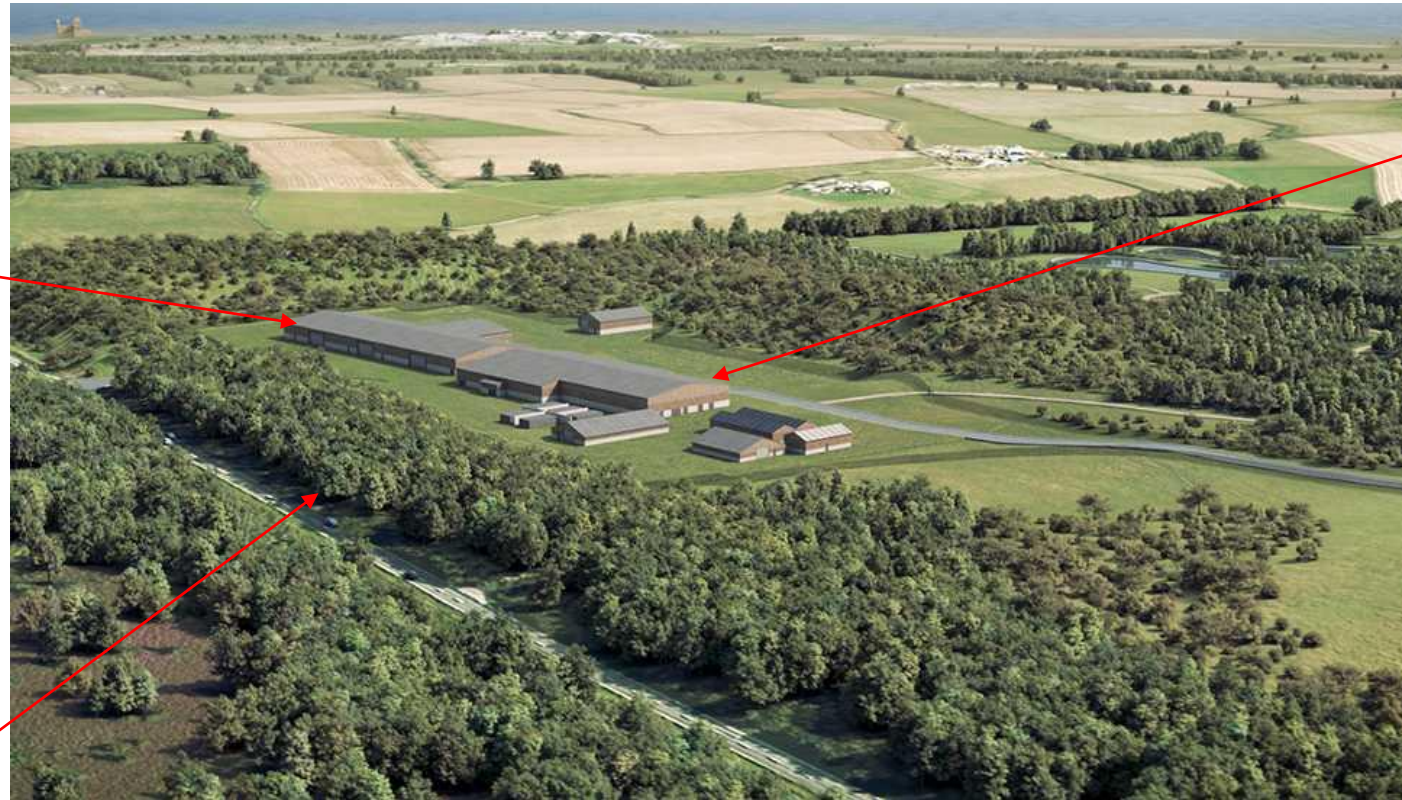

Woodsmith - Anglo American - Yorkshire

- Underground potash mine situated within the North York Moors
- Mine is under construction
- Access via two shafts with the headframes buried under the surface to limit visual impact
- Processing will be offsite
- This mine's annual production is going to be many times greater (~50x) than the likely production from any possible future mine at Great Wheal Vor. However, it's a good example of the mitigation measures new mines within the UK have to take.

Woodsmith - Yorkshire Visual Impact mitigation

Mine buildings designed to look like a farm, all low profile and coloured to reduce visual impact

Trees to screen the mine from view and block any noise from the site

Underground access covered by buildings

Computer generated design of the finished Woodsmith Mine

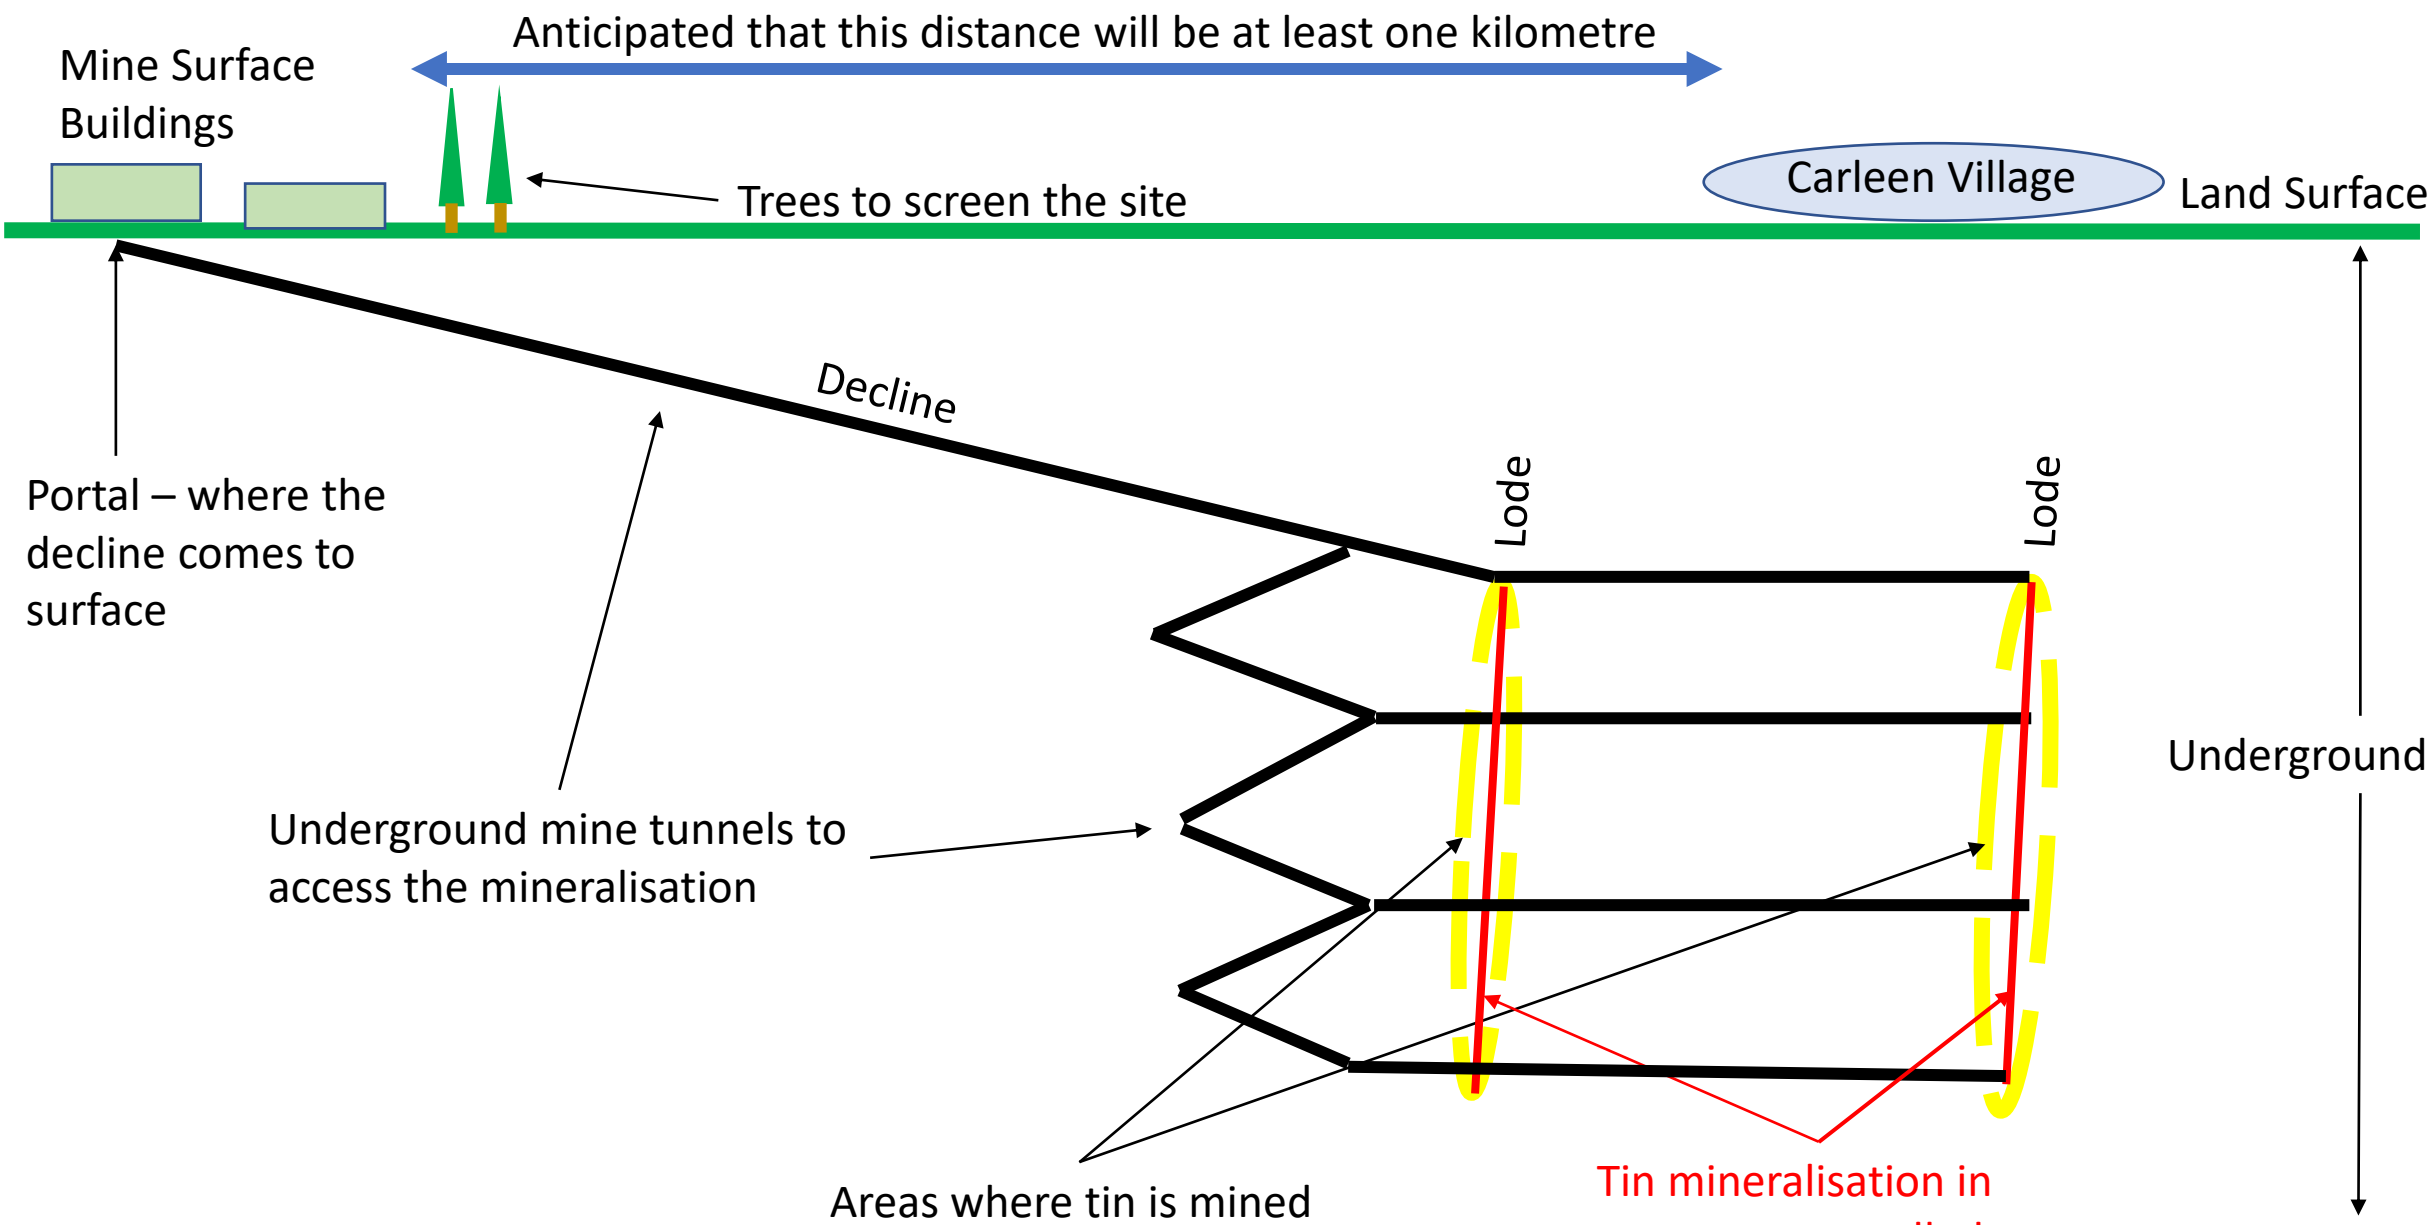

© AngloAmerican PLC

Dalradian – Northern Ireland

Computer generated design for a gold mine in Northern Ireland by Dalradian Gold.

Schematic of a new underground mine at Great Wheal Vor

Not to Scale

The mine will not look like this!

Super pit - Australia

Sources of Information
